# INTEGRATED VULNERABILITY RISK MANAGEMENT AND IT RISK AND COMPLIANCE WITH QUALYSGUARD® AND MODULO

Understanding overall security and compliance risk is an integral part of a risk management program. The integration of security and compliance solutions has provided some insight to understanding this risk, but lack true security risk as organizations are challenged with hundreds or even thousands of vulnerability detections every day. With Modulo Risk Manager, QualysGuard Vulnerability Management data is tightly integrated into the risk management program, allowing vulnerability risk to be correlated with other risks, controls, and assets providing a holistic management perspective of the most important risks.

Integration Benefits

- **Asset Synchronization and Correlation:** Schedule import of assets from QualysGuard Vulnerability Management to constantly keep your asset management module updated with new assets and vulnerabilities. In addition, correlate these assets with other business assets in Modulo to understand business risk.

- **Holistic IT Risk Approach:** QualysGuard Vulnerability Management data is automatically collected and integrated into the risk management program, allowing vulnerability risk to be correlated with other risks, controls, and assets, providing a holistic management perspective of the most important risks. In addition, the Risk Score, the formula used to calculate the risk score for vulnerabilities, can be customized using the following variables:
    - Asset Criticality
    - Asset Relevance
    - CVSS Score
    - Vulnerability Level
    - Vulnerability Type

- **Prioritize Remediation:** This integration allows customers to prioritize not only compliance risks, but also security risks to manage remediation efforts across the organization, prioritize large amounts of vulnerability data using a mature and reliable approach, produce compliance documentation and make more accurate decisions.

Modulo provides a simple mechanism for importing asset and vulnerability data into Modulo Risk Manager. This unique integration allows customers to prioritize not only compliance risks, but also vulnerability risks to manage remediation efforts across the organization, prioritize large amounts of vulnerability data using a mature and reliable approach, and make better decisions through accurate correlations.
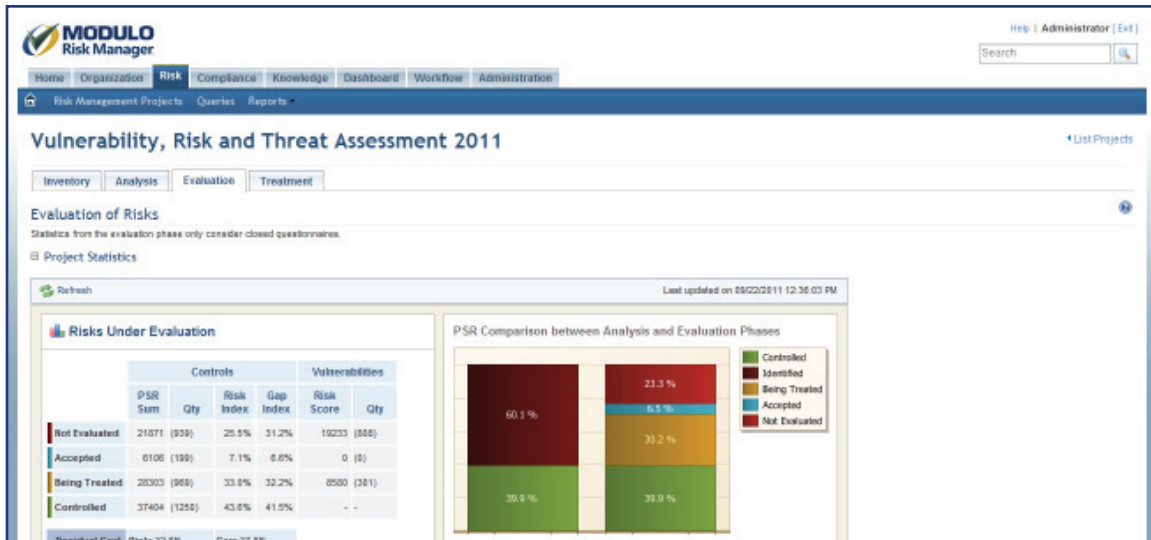

About Modulo

Modulo is a leading global enterprise provider of comprehensive Governance, Risk and Compliance (GRC) management solutions. Modulo's award-winning Risk Manager™ provides hundreds of organizations worldwide with the tools they need to automate the entire GRC management process to monitor, manage and sustain adherence to policy and regulations while reducing enterprise risk and complexity. Customers span the financial, health care, retail, telecom, power & gas and government sectors and include BASF, BC Hydro, Commercial Bank of Dubai, Microsoft, New York University Medical Center, Synovus Financial, and Schlumberger. Modulo Risk Manager has earned "Best Buy" and "5-Star" ratings in SC Magazine's 2011 Risk Management group product review and is the winner of the 2011 & 2010 Info Security Products Guide Global Excellence Award, 2010 Network Products Guide Product Innovation Award and 2011 & 2010 SC Magazine Excellence Award Finalist.
